Hamilton Medical G5 GUI

Silver

Interactive Product Experiences

Client: Hamilton Medical (Switzerland)

Design: Continuum (Italy), Hamilton Medical (Switzerland)

Hamilton Medical recognized that they had a significant opportunity to simplify the interaction between the hospital caregiver and the ICU ventilator, eliminating many of the chances of human error in the process of delivering respiratory care. The Hamilton-G5 is the first ICU patient ventilator to provide a new Ventilation Cockpit that is designed to improve safety through intuitive operation and monitoring. Closed-loop ventilation automatically applies lung-protective strategies, reduces the risk of operator error and promotes early weaning off the machine.
