

Night vision goggles option

for the HAMILTON-T1

Thanks to the night vision goggles (NVG) option, the HAMILTON-T1 can safely be used in the dark without interfering with night vision devices or affecting the pilot's vision. With the simple touch of a button, the display's brightness can be adjusted to a level appropriate for use with night vision goggles.

The HAMILTON-T1 combines for the first time the functionality of a fully featured intensive care unit ventilator with the compactness and ruggedness required for transport. It enables you to provide optimal ventilation therapy to all patient groups during transport, from neonates to adults. The HAMILTON-T1 is also available for armed forces, having successfully passed the tests for military compliance. It is able to meet the highest demands under the toughest conditions.

The compatibility with night vision goggles (PN 161090) is available as an option on the HAMILTON-T1 and the HAMILTON-T1 for armed forces.
