HAMILTON-C3

The compact high-end ventilator
We live for ventilation technology

We live for ventilation technology. Technology that helps caregivers improve the lives of their critically ill patients. We believe that innovation is essential to meet the demands of critical care. To us, innovation is about realizing visionary new ideas and continuously improving existing products, always maintaining the focus on safe, individualized ventilation, as well as ease of use.

We learn from our customers and from multi-disciplinary experts. And we invest in long-term research and development. We develop Intelligent Ventilation solutions: devices and consumables for the ventilation of all critically ill patients – from neonates to adults.

Meet the HAMILTON-C3

The HAMILTON-C3 ventilator is a modular high-end ventilation solution for all patient groups. The HAMILTON-C3’s compact design and independence from compressed air allow maximum mobility throughout the hospital.

- P/V Tool® Pro: Protective Ventilation Tool for lung assessment and recruitment
- High-performance NIV ventilation
- Compact and independent from compressed air
- Adult, pediatric, and neonatal ventilation
For intrahospital transport
The high-performance turbine enables the HAMILTON-C3 mechanical ventilator to be completely independent from compressed air, and its integrated high-capacity battery allows you to ventilate your patients during intrahospital transport without the need for an external power source. The compact design of the HAMILTON-C3 mechanical ventilator makes handling much easier. The HAMILTON-C3 can be attached to a trolley with ease.
Ease of use

In close cooperation with users and ventilation experts, our engineers have designed a user interface that is particularly intuitive. Switching between the HAMILTON-C3 and all other Hamilton Medical ventilators is easy, because they are all operated according to the same principles.

The Ventilation Cockpit on the HAMILTON-C3 consolidates the monitoring data and displays it as intuitive graphics. They give a quick overview of the patient’s current ventilation status and provide a reliable basis for therapy decisions.

“To a colleague I would recommend the HAMILTON-C3. It’s an all-in-one vent. It has great transport capabilities with the battery life and the turbine, and your patients, for the most part, never have to change to another ventilator.”

Kathy Lira, Neonatal Pediatric Education Coordinator
University Medical Center Lubbock (TX), USA
The Ventilation Cockpit

1. Main monitoring parameters
   All of the main monitoring parameters and alarm limits at a glance. The large characters allow you to see them even from a distance.

2. Dynamic Lung
   One quick look shows you tidal volume, lung compliance, patient triggering, and resistance in real-time. The lungs expand and contract in synchrony with the actual breaths.

3. Vent Status
   The Vent Status panel displays six parameters related to the patient’s ventilator dependence. When all values are in the weaning zone, the panel is framed in green, indicating that spontaneous breathing trials or extubation can be considered.

4. Direct access to main controls
   Access and adjust the most important controls for the current mode directly on the main display.
Individualized, lung-protective ventilation

The features available on the HAMILTON-C3 help you to individualize your patient’s ventilation and to implement a lung-protective ventilation strategy.

Adaptive, lung-protective ventilation with ASV
✓ Supports the earliest possible spontaneous breathing by the patient\textsuperscript{1, 2}
✓ Shortens the ventilation time in various patient groups\textsuperscript{1, 2}

Lung assessment and recruitment with the PAV Tool Pro
✓ Hysteresis of the pressure/volume curve can be used for assessing the recruitability of the lung at the bedside\textsuperscript{3}
✓ Has been shown to open the lung in the majority of patients with early ARDS\textsuperscript{4}

HAMILTON-C3
Adaptive Support Ventilation (ASV) adjusts respiratory rate, tidal volume, and inspiratory time continuously, depending on the patient’s lung mechanics and effort. ASV adapts ventilation breath-by-breath, 24 hours a day, and from intubation to extubation.

P/V Tool Pro for lung assessment and recruitment can be used to assess lung recruitability and determine the recruitment strategy to apply. The P/V Tool Pro can also be used to perform a sustained inflation recruitment maneuver and measure the increase in lung volume.
## Features and options

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State-of-the-art ventilation modes</td>
<td>On-screen help for alarm troubleshooting</td>
</tr>
<tr>
<td>Integrated pneumatic and optional Aerogen³ nebulizer</td>
<td>High-performance noninvasive ventilation (NIV)</td>
</tr>
<tr>
<td>Pulse oximetry (SpO2 and pulse measurement)</td>
<td>Adult, pediatric, and neonatal ventilation</td>
</tr>
<tr>
<td>Mainstream (volumetric) and sidestream capnography</td>
<td>High-performance turbine</td>
</tr>
<tr>
<td>Serial interface for connection to electronic patient data records and patient monitors</td>
<td></td>
</tr>

E-learning
Hamilton Medical College provides free and open e-learning on mechanical ventilation and ventilators. Join at: college.hamilton-medical.com.

Universal ventilator consumables
Our accessories and consumables are specially developed for the highest possible patient safety and ease of use. Choose between reusable and disposable parts according to your institutional policies.

Peripheral devices
Our ventilation portfolio includes an active humidifier, the HAMILTON-H900, as well as the automatic cuff pressure controller, IntelliCuff. Both devices may be used with all kinds of mechanical ventilators.
