HAMILTON-C1/T1 with NIV-only option. The clear-cut solution for your NIV challenges

The HAMILTON-C1/T1 NIV-only option provides high-performance ventilation support with noninvasive and high flow oxygen therapy* for pediatrics and adults.

Switch between noninvasive ventilation and high flow oxygen therapy just by changing the ventilation mode and the patient interface. There is no need to change the device or even the breathing circuit. The HAMILTON-C1/T1 can also be upgraded with the O2 assist and IntelliSync+ options for added versatility.

This can help you to save time, reduce your team's workload, the complexity of device training, and your consumables cost.

- ✓ High-performance noninvasive ventilation and high flow oxygen therapy* for pediatric and adult patients
- ✓ Peak inspiratory flows of up to 260 l/min to meet different patient demands
- ✓ Real-time adaptation and compensation for all airway leaks with IntelliTrig®
- ✓ Integrated connectivity and remote control option for active humidification with the HAMILTON-H900 humidifier*
- ✓ Comprehensive portfolio of preassembled breathing circuit sets, filters, and patient interfaces

*Optional
