HAMILTON-G5

The modular high-end ventilation solution

HAMILTON MEDICAL
Intelligent Ventilation since 1983
We live for ventilation technology

We live for ventilation technology. Technology that helps caregivers improve the lives of their critically ill patients. We believe that innovation is essential to meet the demands of critical care. To us, innovation is about realizing visionary new ideas and continuously improving existing products, always maintaining the focus on safe, individualized ventilation, as well as ease of use.

We learn from our customers and from multi-disciplinary experts. And we invest in long-term research and development. We develop Intelligent Ventilation solutions: devices and consumables for the ventilation of all critically ill patients – from neonates to adults.

Jens Hallek
CEO Hamilton Medical AG

Bob Hamilton
CEO Hamilton Medical, Inc.
Meet the HAMILTON-G5

The HAMILTON-G5 is Hamilton Medical’s most modular high-end mechanical ventilator. A wide range of standard features and options allows you to tailor the HAMILTON-G5 to your needs.

- P/V Tool® Pro for lung assessment and recruitment
- Transpulmonary pressure measurement
- High flow oxygen therapy
- Integrated IntelliCuff pressure controller
- Adult, pediatric, and neonatal ventilation
- Adjustable O2 enrichment
- Adjustable volume limitation for neonatal patients
Flexible device configuration

Customized solution
You can configure the HAMILTON-G5 in several different ways to customize the device for your environment. If using a trolley, you can mount the monitor either on top or in front of the ventilation unit. If the unit is positioned on a shelf, you can mount the monitor on top or to the side using the side-mount option. You can also adjust the orientation and angle of the monitor by turning and tilting it as required.

Optimal visibility
The 360°-visible alarm lamp on top of the HAMILTON-G5 monitor allows you to identify alarms easily. The optional nurse-call capability provides additional support for optimal alarm detection. The 15-inch touch screen was designed for smooth and fast operation. It also gives you an overview of the patient’s current ventilation status at a quick glance and provides a reliable basis for therapy decisions.
In close cooperation with users and ventilation experts, our engineers have designed a user interface that is particularly intuitive. Switching between the HAMILTON-G5 and all other Hamilton Medical ventilators is easy because they are all operated according to the same principles.

The Ventilation Cockpit on the HAMILTON-G5 consolidates the monitoring data and displays it as intuitive graphics. These provide a quick overview of the patient’s current ventilation status and provide a reliable basis for therapy decisions.

“I think the HAMILTON-G5 is a unique machine, and it is almost revolutionizing the way we, as critical care physicians, take care of our patients.”

Dr. Shaikh A. Hai, Chief of Surgical Critical Care
The Methodist Hospital, Houston (TX), USA
The Ventilation Cockpit

1. Main monitoring parameters
All of the main monitoring parameters and alarm limits at a glance. The large characters allow you to see them even from a distance.

2. Dynamic Lung
One quick look shows you tidal volume, lung compliance, resistance, and patient efforts/ triggers in real time. The lungs expand and contract in synchrony with the actual breaths.

3. Vent Status
The Vent Status panel displays six parameters related to the patient’s dependence on the ventilator. When all values are in the weaning zone, the panel is framed in green, indicating that spontaneous breathing trials or extubation can be considered.

4. Direct access to main controls
Access and adjust the most important controls for the current mode directly on the main display.
Individualized, lung-protective ventilation

The features available on the HAMILTON-G5 help you to individualize your patient's ventilation and to implement a lung-protective ventilation strategy.

Adaptive, lung-protective ventilation with ASV

✓ Supports the earliest possible spontaneous breathing by the patient\(^1\), \(^2\)
✓ Shortens the ventilation time in various patient groups\(^1\), \(^2\)

Lung assessment and recruitment with the P/V Tool Pro

✓ Hysteresis of the pressure/volume curve can be used for assessing the recruitability of the lung at the bedside\(^3\)
✓ Has been shown to open the lung in the majority of patients with early ARDS\(^4\)

Automatic cuff pressure control with IntelliCuff

✓ Continuous cuff pressure control can decrease microaspiration and VAP\(^5\), \(^6\)

Transpulmonary pressure measurement

✓ PEEP set based on transpulmonary pressure can improve compliance and oxygenation in ARDS patients\(^7\)
✓ Transpulmonary pressure measurement can avoid the use of ECMO in the most severe patients\(^8\)

Adaptive Support Ventilation (ASV) adjusts respiratory rate, tidal volume, and inspiratory time continuously, depending on the patient’s lung mechanics and effort. ASV adapts ventilation breath-by-breath, 24 hours a day, and from intubation to extubation.

P/V Tool Pro for lung assessment and recruitment can be used to assess lung recruitability and determine the recruitment strategy to apply. The P/V Tool Pro can also be used to perform a sustained inflation recruitment maneuver and measure the increase in lung volume.

IntelliCuff pressure controller continuously measures and automatically maintains the user-set cuff pressure of an endotracheal or tracheostomy tube in real time.

Transpulmonary pressure measurement allows optimization of PEEP, tidal volume, and inspiratory pressure. Use it in combination with the P/V Tool Pro to assess lung recruitability more precisely and perform recruitment maneuvers.
Features and options

- State-of-the-art ventilation modes
- Integrated pneumatic and optional Aerogen® nebulizer
- Pulse oximetry (SpO2 and pulse measurement)
- Mainstream (volumetric) and sidestream capnography
- Serial interface for connection to PDMS or patient monitors
- High-performance noninvasive ventilation (NIV)
- Adult, pediatric, and neonatal ventilation
- Integrated control for IntelliCuff pressure controller
- Heliox therapy
- Continuous monitoring of driving pressure
- Configurable loops and trends
- Hot-swappable battery backup
- Integrated high flow oxygen therapy
E-learning
Hamilton Medical College provides free and open e-learning on mechanical ventilation and ventilators. Join at: college.hamilton-medical.com.

Universal ventilator consumables
Our accessories and consumables are specially developed for the highest possible patient safety and ease of use. Choose between reusable and disposable parts according to your institutional policies.

Peripheral devices
Our ventilation portfolio includes an active humidifier, the HAMILTON-H900, as well as the automatic cuff pressure controller, IntelliCuff. Both devices may be used with all kinds of mechanical ventilators.
